**Advance Web Development**

**DEPARTMENT OF COMPUTER SCIENCE**

This project is a personal portfolio website designed and developed by Hira Falak Sher. The goal of this project is to create a responsive and attractive online portfolio that showcases personal information, skills, projects, and a contact section. The website is built using HTML, CSS, and JavaScript to demonstrate practical frontend development skills.

## **Objectives**

The main objectives of this project are:

- To design a user-friendly and responsive portfolio website.
- To apply HTML and CSS for structure and styling.
- To use JavaScript for basic interactivity (like scroll-to-top button).
- To demonstrate understanding of web development fundamentals.

## **Tools & Technologies Used**

The following tools and technologies were used in this project:

- HTML5
- CSS3
- JavaScript (Basic)
- Visual Studio Code (Editor)

## **Website Structure**

The website contains the following main sections:

- Header (with navigation links)
- About Me (personal introduction and profile picture)
- Skills (list of technical skills)
- Projects (details of sample projects)
- Contact (simple form for user message)

## **Conclusion**

This portfolio project helped in improving practical web development skills, including design layout, CSS styling, and the use of JavaScript for interactivity. It serves as a personal website to showcase academic and professional work in a creative way.
